

Where Does All That Food Go?

Key Vocabulary	
digest	Break down food so it can be used by the body.
oesophagus	A muscular tube which moves food from the mouth to the stomach.
stomach	An organ in the digestive system where food is broken down with stomach acid and by being churned around.
small intestine	Part of the intestine where nutrients are absorbed into the body.
large intestine	Part of the intestine where water is absorbed from remaining waste food. Faeces are formed in the large intestine.
rectum	Part of the digestive system where faeces are stored before leaving the body through the anus.

The digestive system is the journey food makes through the human body. There are many parts to the digestive system and each has an important role.

Animals have different sets of teeth, depending on their diet:

Here is an example of a food chain. It shows what each organism (living thing) eats.
